

FABRICATIONS

JSF Fabrications has continued to go from strength to strength. We have been able to continue expanding our initial capacity, recently doubling our floor space by taking on the adjacent unit.

This has been made possible by the great team we have assembled, with a huge amount of collective experience and passion for the success of JSF Fabrications.

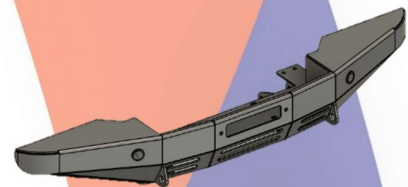

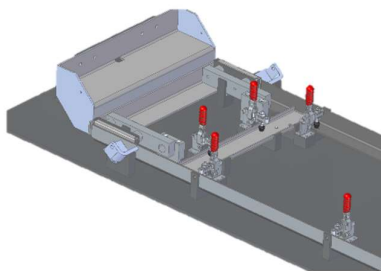

We are now able to offer Design & Prototyping, Welding/ Fabrications, Laser Cut Parts, Folding (Press Braking), Drilling, Cutting, Riveting & Rivnuts, Finishing (including powder coating, electroplating etc.)

These capabilities are bolstered by our machining facility in Brownhills.

The team here is confident we can meet any customers expectation no matter how large or small.

Products and projects we have completed so far include work for renewable energy sources, automotive markets and retail furniture. As you can hopefully see our processes and knowledge are able to deliver a very wide spectrum.

We hope to continue our success of the previous year and be able to celebrate many more successful years to come.

ISO9001 Registered, Coded Welding, NEBOSH Accreditation, Citation Health & Safety Management System
